Bluelight Gazetteer Management System

Providing the OS's AddressBase Premium and its new Emergency Services Gazetteer through our comprehensive gazetteer management system.

Emergency services face considerable challenges in maintaining and sharing accurate address data:

2.7M address changes in Great Britain every six weeks.

Manual address updates are time-consuming, inefficient and vulnerable to human error.

Emergency response times are hampered if address data is inaccurate, incomplete or non-existent.

Local data on **crime or fire risk locations may not exist** on national datasets.

Multiple systems need to be integrated, e.g. command and control and the mobilising system, for efficient deployment to precise locations.

Persistent budget cuts mean emergency services have to manage lean resources.

Transformative, feature-rich gazetteer software

Used by over half the emergency services in Great Britain, our advanced **Bluelight GMS**, enables you to maintain and enhance your address data to the British Standard BS7666.

Designed for comprehensive gazetteer management, Bluelight provides a single source of Ordnance Designed for comprehensive gazetteer management, Bluelight provides a single source of OrdnanceSurvey's AddressBase Premium (ABP), alongside the recent addition of the Emergency Services Gazetteer.

Our Bluelight GMS allows you to add your own locally-known addresses that do not exist in ABP, in the same British Standard format, complete with Unique Property Reference Numbers (UPRN).

And with UPRNs attached to every address, you can link your risk data and other location intelligence to all your addresses to better equip emergency crews when deployed to a location.

Driving efficiency with our Bluelight GMS

Using a feature-rich, central gazetteer management system to maintain high-quality address data will:

Ensure consistency across the entire emergency service through **seamless integration** with your operational systems, such as command and control and your mobilising system.

Enable rapid searches on historic and live records by searching the entire property life cycle, ensuring quick deployment to the correct address.

Deploy crews faster by **creating local properties and streets** that do not exist in AddressBase Premium, in the British Standard BS7666, complete with UPRNs and USRNs.

Take local records from your legacy systems and create them in your single source GMS in AddressBase Premium format to **ensure consistency and quick retrieval.**

Enhance existing addresses by creating local only data, e.g. alternative names, enabling faster deployment.

View and interrogate addresses with a local-only layer and/or an AddressBase Premium layer, providing only the data you want to see.

Automate Change Only Updates (COU) to maintain accuracy and consistency efficiently.

Consume the OS's new Emergency Services Gazetteer through our GMS to provide specialist location data alongside AddressBase Premium.

Reduce infrastructure and maintenance costs with a hosted solution that enhances resilience and agility.

Continual development to ensure **compatibility with changes** in technology and data standards.

Going beyond gazetteer management

Our GMS seamlessly integrates with our complementary software tools to boost address data accuracy across your organisation, including matching, cleansing and reformatting in the British Standard for consistency. Location Manager stores risk data and location insights alongside addresses, while our address search API delivers fast, precise lookups.

"Having a central solution for both organisations (CFRS & Bedfordshire FRS) held in a cloud environment has really streamlined processes, making the management of files and network restrictions much simpler."

Nicola Smith
Information Manager at Cambridgeshire Fire and Rescue Service
